Jesus Sard Gonzalez

Operations Specialist | Technology Strategist | Systems Automation
& AI Integration | Open to Junior Developer Roles
Sevilla y alrededores

Extracto

I am a professional with over ten years of experience in technology management and operations. At Genetika Systems I served as Executive Director, leading customer upgrades, digital services, and community engagement. Currently I work as an Operations Specialist at TIPSA, managing logistics workflows and supporting clients with transport management systems.

Alongside my corporate experience, I maintain a public GitHub project (AIOS) where I explore agent-based architectures, containerization, and workflow automation. This project demonstrates my ability to manage complex systems and translate emerging technologies into practical enterprise applications.

My goal is to contribute to organizations seeking to strengthen their operations and adopt modern automation practices. I bring a mix of operational discipline, technical fluency, and a forward-looking perspective on AI integration.
